EDUCATION

2023-2027

FEDERAL UNIVERSITY OF TECHNOLOGY, AKURE

- BTech, Computer Science

EXPERTISE

- TypeScript & JavaScript (ES6+)
- React.js
- Next.js
- State Management (Zustand, Redux)
- Database Design & ORM (Prisma)
- REST API Integration
- Styling & UI Systems
- Git & Version Control
- Operating System Fundamentals (Windows, Linux)
- Currently Learning: Go (Golang)

PROFILE

Computer Science student and Frontend Developer with a 4.53 CGPA and hands-on experience shipping responsive, production-grade web applications. Currently building production features, API integrations, and UI systems as a Frontend Developer at a startup, working closely with product and backend teams to ship at speed. Comfortable across the stack — from frontend architecture and state management to databases and modern dev workflows — and currently expanding into Go and backend development.

WORK EXPERIENCE

- **Savey Africa** APRIL 2026-PRESENT
  Frontend Developer
  - **Built and shipped production-grade frontend features** across core savings modules, financial health, and money-request workflows.
  - **Integrated and debugged backend APIs**, collaborating with backend engineers to deliver reliable data flows, forms, dashboards, and third-party account workflows.
  - **Contributed to product architecture and UX**, implementing state management, system-based theming, reusable components, animations, and responsive interfaces within an agile based workflow.

PERSONAL PROJECTS

*f*lickerly — Movie trailer discovery app

Lets users browse and preview trailers for the latest movies through a fast, clean interface powered by external APIs.

bloggr — Full-stack blogging platform

A complete blogging experience with user authentication, content management, and full CRUD functionality for creating and managing posts.

SusWord — Social party game

An imposter-style word game built for groups — play offline pass-and-play with 4–10 players, or connect remotely through online multiplayer rooms.
